

Thern Davit Cranes Bring Reliable Lifting Power to Wastewater Industry

Portability Key to Davit Success

July 29, 2009, Winona, Minn. –Thern portable and transportable davit cranes provide a proven solution to meet the load handling and positioning needs of operators throughout the water and wastewater industry. Designed with an array of desirable features and benefits, Thern davits are an economical and user-friendly option for routine pump and mixer positioning, UV panel maintenance, lifting screens and flow gates, and much more.

With available load lifting capacity up to 2,000 pounds, portable davits from Thern feature durable, lightweight construction allowing for easy movement between multiple lift stations. Portable crane units rotate 360 degrees in pedestal, wall or flush mount bases, and feature a telescoping boom that easily adjusts to four positions to allow changes in hook height and reach to facilitate lifting and moving of various size loads. Operators can also choose between manual or electric operation, and powder coated, galvanized finish, or stainless steel construction for durability in corrosive environments.

Thern's line of davit cranes has recently been expanded to further meet market demands with the development of the new 5PT30 transportable davit crane. While maintaining many of the key features of the portable davit line, the 5PT30 transportable davit features a 3,000 pound load capacity, 360 degree mast rotation with convenient locking at 30 degree increments, and a telescoping boom that adjusts to five positions. The 5PT30 is available with manual or electric operation and standard enamel finish, or epoxy finish for improved corrosion resistance.

For applications requiring non-standard features, Thern engineers can quickly and easily design custom products tailored to your unique requirements. Visit www.thern.com to learn how Thern davit cranes can work for you.

Celebrating its 60th Anniversary in 2008, Thern, Inc. is a major designer and manufacturer of winches, cranes and hoists for virtually any industrial application. Founded in 1948, Thern is headquartered in Winona, Minnesota and markets its products worldwide.
